

BEOPLAY S3

Flexible wireless home speaker that fills your room with great sound

EMBRACING GEOMETRY

BeoPlay S3 draws heavily on geometry as a design reference. But also, it is reminiscent from the lines of two shapes embracing each other. The balance of the two gives you a harmonic shape, designed to let out great sound. The inspiration and shape originates from both the dodecahedron, a so-called Platonic solid, which is a geometric form named after the ancient Greek philosopher Plato and a tennis ball with two identical parts joining each other in an embrace.

FEATURES

The wireless stereo

You can pair two S3s to get a wireless stereo experience – a real reproduction of three-dimensional sound; sound that pans from side to side, sound that goes up and down, and back and forth.
