

Stream Magic 6 v2

User Interface Update

At Cambridge Audio we've been listening to you and thinking carefully about how we can improve our products. As a result we've been working hard to simplify the Stream Magic 6v2 user interface, as well as the way in which you select and play content from your own music libraries.

We've implemented a new media queue and simplified the menu structures so you can more easily and quickly find what you're looking for.

This update also adds support for Spotify Connect. If you subscribe to Spotify Premium you can listen to your favourite music on your Stream Magic 6 v2 while controlling it from the Spotify app on your phone or tablet.

New Media Queue

The Stream Magic 6 v2 features a queue function that allows you to choose multiple albums and/or tracks to be played.

Adding to the Queue

When browsing the Media Library menus you can add media to the queue in the following ways.

Adding a single track

Selecting a single track will show the following menu:

Play now	Add the new track the current queue position and start playing the new track
Play next	Add the new track to the current queue position but continue playing the current track
Add to queue	Add the track to the end of the queue
Replace queue	Remove all queue items and replace with the new track

Pressing the 'Play' button on a track or collection of tracks will automatically carry out a 'Play now'

Adding an album or collection of tracks

Press and hold the select dial (or Enter on the remote handset) on an album or collection of tracks (i.e. an artist folder or genre folder) to show the following menu:

Play now	Add the collection of tracks the current queue position and start playing the new track
Play next	Add the collection of tracks to the current queue position but continue playing the current track
Add to queue	Add the collection of tracks to the end of the queue
Replace queue	Remove all queue items and replace with the collection of tracks

Pressing the 'Play' button on a track or collection of tracks will automatically carry out a 'Play now'

Viewing the Queue

During media library playback the Stream Magic 6 v2 displays a in the 'Now Playing' screen, to view the Queue press the Reply button.

The displayed menu shows the content queued for playback, the currently playing item will have a Play icon next to it.

Tracks that were added as part of an album or larger collection (for example, an artist or genre etc) will be shown indented by a below the album or collection title.

You can navigate to any item and select it (via Enter or Play/Pause) to jump to that point in the queue.

Editing the Queue

While viewing the queue Stop/X can be used to remove items.

At the bottom of the Queue a Clear Queue command is available for deleting the whole queue.

Switching the Stream Magic 6 v2 into standby will delete the Queue. If 'Instant On' mode (see further on in this update) is enabled the queue will not be deleted.

Home Menu

The Stream Magic 6 v2 home menu consists of 5 items:

You can return to this menu at any time by pressing Home (🏠) the button.

Simply scroll through the items with the scroll wheel or ▲▼ and 'Enter' on the remote control and press in the scroll wheel or use the Enter/Mode button on the remote to select the item you want.

Radio

This menu lets you choose from the thousands of internet radio stations, streaming services and podcasts available to Stream Magic users.

Location

Enables you to choose from the radio stations in any of the countries which you choose from a list.

Genre

Enables you to choose radio stations according to their genre, for example Classic Rock, Sport, News, etc.

Search Radio Stations

Enables you to search for a station you know the name of.

Streaming Services

Refer to product manual for full functionality

Settings

This Menu contains all of the settings to configure your Stream Magic. It remains largely unchanged from the description in the product manual with the following exceptions:

Stream Magic 6v2 Name

Power → Instant On

Stream Magic 6v2 Name

This menu allows you to set the name of your Stream Magic 6 v2. This is the name other UPnP devices (such as controller apps etc.) will display when they see your Stream Magic 6 v2 on a network. It is also the name that appears in the Spotify app's device picker. The default name is 'Stream Magic 6 v2' but this can be changed to something more personal, such as 'Dad's Stream Magic 6 v2' or 'Kitchen' etc.

Power → Instant On

Instant On (Previously 'Idle Mode') when enabled, allows your Stream Magic 6 v2 to enter a lower power suspended state using the Standby/On button. The display is turned off and many of the internal processes and circuits are disabled to reduce power consumption. However the difference between Idle and Standby is that in Instant On, power remains connected to the main controller, Ethernet and Wi-Fi sections.

In Instant On, networking functionality remains alive in the background. This means that Stream Magic 6 v2 can be quickly woken up out of the suspended state into an operational state using not only the front panel, the infra-red remote and the control bus, but also Spotify apps and the Stream Magic App running on iOS or Android devices. This is not possible when the unit is in full Standby mode.

Short presses of the Standby/On button then toggle between On and Instant On.

Note: after putting the unit into Instant On, you will not be able to wake the unit into full On mode until 5 seconds have elapsed. Full low power standby can still be activated by keeping the Standby/On button pressed for more than two seconds. A subsequent press of Standby/On turns the unit fully on, but remember that this can't be done over the network (i.e. from the iOS app) and that it takes longer to reach the full operational state.
