

**SPM 1200 MK2
POWER AMPLIFIER MANUAL**

OPERATING INSTRUCTIONS

INSTALLATION

Your amplifier should be positioned to ensure a free flow of air over the rear heat sink and through the upper and lower grilles. When driven continuously at well above average listening levels, the temperature on the heat sink may exceed 50°C. This is not a fault, but an indication of the need for adequate ventilation.

Please ensure that the IEC mains lead is correctly terminated.

UK/EUROPE	Brown =	LIVE	= Black	USA/CANADA
	Blue =	NEUTRAL	= White	
	Yellow/Green =	EARTH	= Green	

THE SPM 1200 Mk 2 MUST BE EARTHED AT ALL TIMES VIA ITS OWN MAINS LEAD. FAILURE TO DO THIS MAY BE HAZARDOUS.

CE This unit complies with EN 50081-1 & IEC 801/2

It has come to light that, in some European countries a hum may occur if Pre and Power Amplifiers are connected to mains wall sockets which do not have an earth. Please ensure that, if this is the case, the pre and power amps are connected via a multi-way mains block which contains an earth point at each socket outlet. This is to ensure that the chassis metalwork of each item is connected together and Chord Electronics Limited firmly recommends that an earthing method for the building is implemented.

REAR PANEL

The two female XLRs are pre-amplifier inputs. Also phono input sockets are available immediately outboard of the IEC mains plug. Please connect these with the amplifier switched off. The speakers should be connected to the high current binding posts using banana plugs or spade terminals.

OPERATION

When the amplifier is connected to the mains the central clear ball will illuminate red (standby). Press the ball in to switch on the amplifier. The ball will illuminate green (operational). There will be a delay of about 12 seconds before the output signal is fed to the loudspeakers the ball will then change to blue to indicate the output relays are engaged.

In the event of a major overload or a short circuit across the output of any channel, the blue "power on" illumination will indicate trip by fading and immediately re-illuminating to red standby mode. The amplifier will shut down automatically and it should then be switched off at the mains outlet. When the fault condition has been rectified, the amplifier can be switched on and will power up as normal. A minimum period of 1 minute must be allowed to elapse between switching off and switching on again. This is to allow the power supply protection circuitry to re-set itself.

This amplifier is fitted with a trigger system designed to switch the unit on or off remotely.

N.B. with no plug inserted in the 12V trigger socket, the amplifier will operate as normal.

The external trigger should be connected to the amplifier via a standard 1/8th inch / 3.5mm (mono or stereo) jack plug to the socket fitted to the rear of the unit.

The amplifier should be switched into the standby position (red illumination) and the 12V trigger lead inserted. The amplifier will now switch on when the trigger voltage is applied, and will switch off again when the voltage is removed (Positive Trigger). The front panel ball will indicate orange when the trigger is connected and change to purple when the trigger is operating to switch on the amplifier. You do not need to switch on the amplifier by pressing the ball on the front panel when the trigger is used – however it will still operate normally if you use the front panel button.

The connections are as follows:

The tip of the plug is the +5V to +12V dc connection, the centre and rear connection are the 0V or ground connection.

CARE AND CLEANING

The SPM 1200MK2 requires no special care other than common-sense. Spray window cleaner (clear type) may be used (if first sprayed on to a soft cloth) to remove surface blemishes such as finger marks from the metal casing or the wooden side cheeks (if fitted). Never spray directly on to the amplifier and never use abrasive cleaning materials, use only a lint free soft cloth as described.

SERVICE INFORMATION

There are no user serviceable parts in your SPM 1200 MK2. It should only be serviced by Chord Electronics Limited or their expressly approved Service Agents.

WARNING - The power supply components within this amplifier are designed to be operated at lethal voltages and energy levels. Circuit designs that embody these components conform to applicable safety requirements. Precautions must be taken to prevent accidental contact with power-line potentials. Do not connect grounded test equipment.

SPECIFICATIONS	SPM 1200 MK2 POWER AMPLIFIER
OUTPUT POWER	350W rms per channel @ 0.05% distortion into 8Ω, 480W rms per channel into 4 Ω, 550W rms into 2Ω. Thermal limitation only, 1 channel driven.
DYNAMIC HEADROOM	440W rms per channel into 8Ω, 550W rms per channel into 4Ω. - 1 KHz, 20 cycles on, 480 cycles off. Peak pulses 8 milliseconds burst
FREQUENCY RESPONSE (8 OHMS)	-1dB, 0.2Hz to 46KHz -3dB, 0.1Hz to 77KHz
FREQUENCY RESPONSE (4 OHMS)	-1dB, 0.2Hz to 39KHz -3dB, 0.1Hz to 75KHz
SIGNAL TO NOISE RATIO	Better than -103dB, 'A' weighted two thirds power.
CHANNEL SEPARATION	Better than 90dB.
PRE-AMPLIFIER INPUT CONNECTION	2 x gold-plated, fully balanced XLR sockets. 2 x gold-plated custom phono sockets, unbalanced.
INPUT IMPEDANCE	100kΩ. Unbalanced/Balanced.
INPUT CAPACITANCE	<30pf.
OUTPUT IMPEDANCE	0.04Ω
OUTPUT INDUCTANCE	2.6μH
OUTPUT CONNECTIONS	4 x high current binding posts
SLEW RATE	60V per μS, 1KHz 20V square wave
GAIN	30dB.
STABILITY	Unconditional
DIMENSIONS	420mm (w) x 355mm (d) x 150mm (h)
WEIGHT	15Kg
